

Naturally Canadian

The graceful aging of  
your roof or wall  
may be a choice as simple...

as **BLACK** or **WHITE**

NBP natural Eastern White Cedar shingle shown here on background of 24 month old shingles left to weather naturally in the snow, rain and sun to a graceful silver-gray.

Prospective buyers sometimes express concern over the eventual (and particularly uneven) BLACK colour associated with *some* weathered Canadian Cedar Shingles. There is in fact a CHOICE of Gray or Black weathering! Eastern White Cedar (NBP Canada shingles) subjected to weathering elements, will weather to a silver-grey in a period of 12-24 months.

It is in fact Western Red Cedar weathers to varying degrees of black.

It's simple; if you don't want BLACK, choose WHITE!
